

## How do the Climateurope2 Training Modules strengthen Climate Services?

The Climateurope2 project provides a set of Training Modules designed to enhance the understanding and uptake of Climate Services across Europe. These modules support knowledge brokerage and market stimulation, two strategic goals that help build a robust and equitable Climate Services ecosystem. The modules bridge knowledge gaps and empower stakeholders to make informed decisions in response to climate variability and change. Integrated into this Climateurope2 platform, the Training Modules are co-created by various project partners, ensuring they reflect diverse expertise and the breadth of work that is being conducted across the project.

### 3 categories of Training Modules

The available modules are distinguished into 3 categories, based on their type of content.

#### Educational / Informative Training Modules

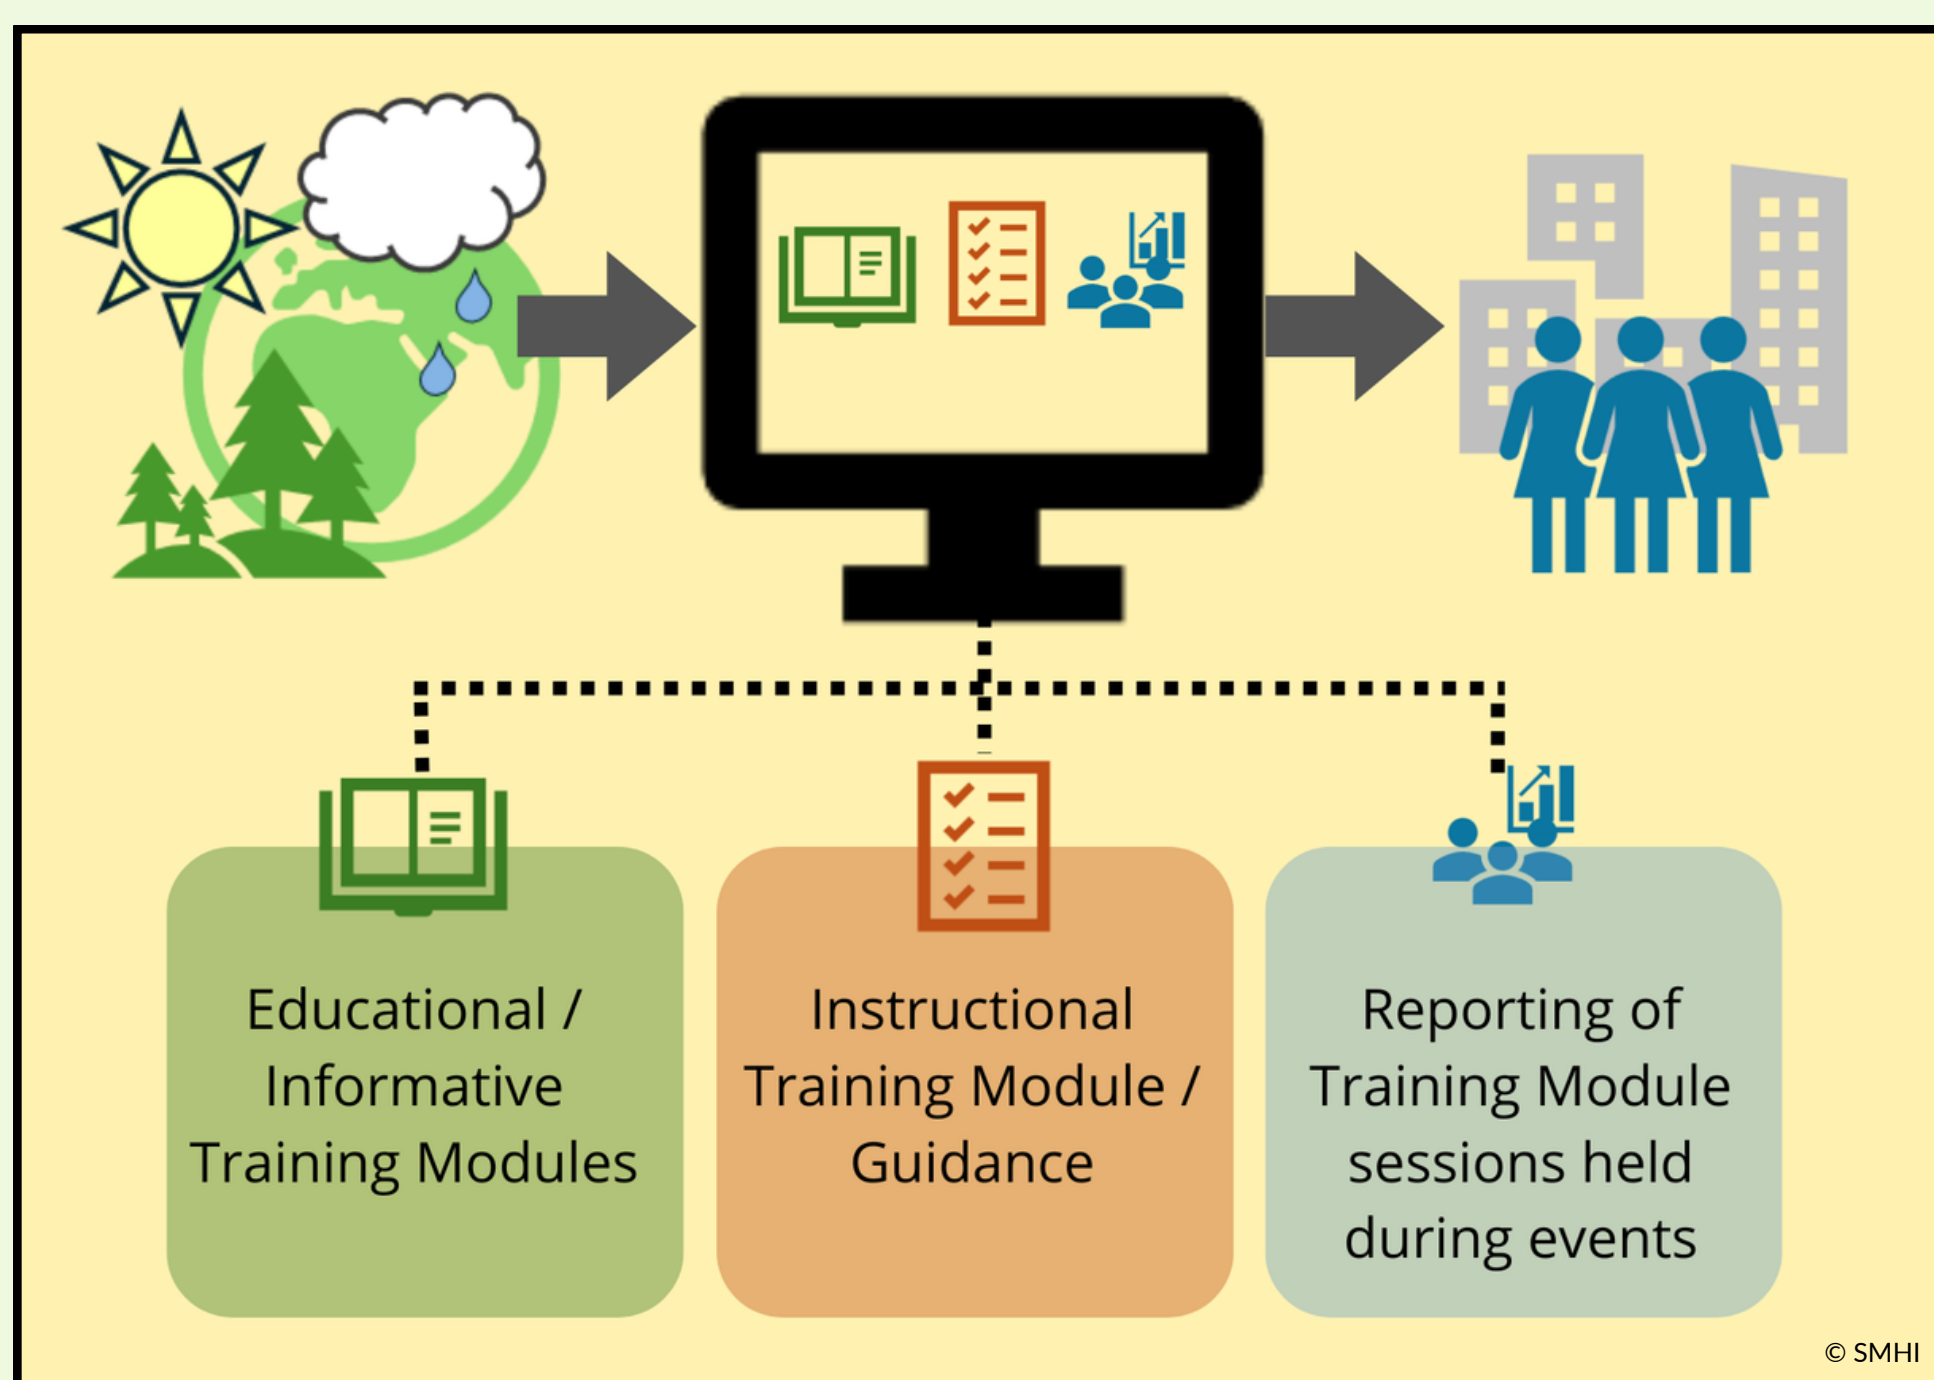

Educational and Informative Training Modules within the Climateurope2 project are structured, self-contained learning units designed to teach specific knowledge, skills or behaviors in a concise format. It can be used for a course or program to teach users about specific knowledge or a specific set of skills. This type of Training Modules can break complex subjects into small units, making learning easier and more interesting.

#### Instructional Training Module / Guidance

An instructional Training Module or Guidance, is a focused, self-contained unit of instruction designed to teach a specific competency, skill, or topic, to direct make informed decisions in trainees' management, maintenance, personal, social or educational steps. The content functions as a structured learning "block" or "chapter" within a larger, more comprehensive training program, course or enhancing skills, with a particular focus in this context on the use of climate services.

#### Reporting of Training Module sessions held during events

This category contains documentation of training sessions held during on-site or online sessions within the Climateurope2 project. They can be consulted for information on how a session was presented, the content and structure of the programme, the type of interaction with the audience, etc., and above all to provide insight into a training session organized at a Climateurope2 event, such as the annual festival.

### Training Modules build capacity and support standardisation

The Climateurope2 Training Modules strengthen Climate Services by building capacity, supporting standardisation efforts, and stimulating demand for Climate Services, contributing to the project's mission of advancing climate adaptation and mitigation across sectors.
